

**AppIntegration**- Contains a custom browser I set up for this project. (Moogoo)

**AppIntegration2**- This is a launcher app that launches a website from the search field. (Make sure to enter the full web address example. --> <http://www.google.com>)

**ContentService**- This is my Recipe App I created last month. When you open the browser section on any part of the app it will load the recipe url in the Moogoo Browser.

Enjoy!
